Exchange Medium

Individually — password generators. CryptoSave, Cryptomazer, BPT. Each solves the "password without a server" task.

In pairs or groups — a cross-platform, faceless network. Works over any channel:

- Physical: stickers, graffiti, letters, notes
- Analog: text, QR on paper
- Electronic: messengers, social networks, SMS

Not dependent on any platform. The channel is transport, not infrastructure.

BPT — operational center for token and card emission. Deploys faceless networks, exchange and communication systems **in the absence of standard communication systems**. No internet — works via a note. No messenger — works via QR on a wall. Nothing at all — works via a spoken coordinate.

Purpose — a wide range of tasks: ephemeral organizations, games, business, scientific and technical exchange, management.

Cannot be hacked. Cannot be censored.
